

Prooceano is pleased to announce that, after years of integration within the **CLS** group, it is expanding its scope of operations and will now be known as **CLS Brasil**.

Our recognized standard of excellence in service delivery remains unchanged and now extends to include telemetry and maritime security solutions:

- Tracking of commercial vessels, supply ships, and other assets via satellite, as well as value-added services to support offshore, port, and maritime sectors.
- Electronic maritime navigation charts.
- Global satellite communication services for the maritime industry.

These new activities have been acquired from **Carrierweb**, specifically from **Prime Soluções Tecnológicas** and **SatOne Telecomunicações**, both of which have extensive experience in this sector.

CLS, a subsidiary of the French Space Agency (CNES) and Compagnie Nationale à Portefeuille (CNP), is a globally recognized company providing space-based monitoring and surveillance solutions. The group operates in five strategic areas: **sustainable fisheries management, environment, maritime surveillance, mobility, and energy and infrastructure.**
